

FLA Software 1.3.1 Announcement

Greetings! We at Synercon Technologies are proud to announce the release of some important updates to the TruckCRYPT software system. This release is focused on the software running on the Forensic Link Adapter.

- We've improved the detection process for some Mercedes Benz ECMs that use J1587 for data page downloads. After updating, your FLA will be more consistent when downloading these ECMs.
- We have added Vehicle Speed Sensor ratio and pulses-per-mile configuration parameters to the data extracted from DDEC IV and DDEC V ECMs.
- The FLA will now automatically detect the CAN bitrate used by the truck network to support downloading data from newer vehicles using 500K bitrate J1939. It will also display the CAN bitrate in use on the home screen. This is a foundational step for incorporating more vehicle support in the future.

Don't forget to update your FLAs! As always, if you experience any issues, do not hesitate to contact us.
